Promoting peace of mind for busy caregivers, the Theora Link Smartphone App for caregivers, coupled with the Theora Connect wristwatch-style wearable for loved ones, uses situational awareness - knowing your care recipient's status, location, and the ability to reach them - to remotely monitor loved ones, understanding caregivers' cannot always be with loved ones 100% of the time. This also supports more active and independent care recipients, with reassuring remote caregiver oversight.

The caregiver's smartphone app connects to care recipient's wearable - a non-medical looking wristwatch which includes a pre-activated phone, 2-way audio, GPS and easy to locate SOS button, which calls directly to their caregiver (not a call center). - App's Safe Zone feature enables caregivers to setup virtual GPS safety nets and notifies caregiver if a loved one has exited the area. -Quik Connect 2-way audio allows caregivers to automatically speak through the wearable, no button pushing required by care recipient, especially helpful if loved one cannot or doesn't answer. - Scalable, for a continuum of care – add additional monitoring solutions if or when needed, using the same familiar Theora Link app for caregivers. - Create care teams by downloading the free app to multiple trusted caregivers.
